Summary

En 60 secondes

Ce guide Arihant vous accompagne à travers chaque chapitre du NCERT en histoire, géographie, sciences politiques et économie. Chaque chapitre bénéficie de notes concises, de questions de type examen et de corrigés conçus pour les examens du CBSE. Il condense quatre manuels denses en un seul volume pensé pour la révision. L'objectif : obtenir de bonnes notes sans relire quatre livres séparés.

Pourquoi le lire

L'année du examen de fin d'études est stressante, et quatre matières s'accumulent vite. Ce volume unique condense le programme du NCERT en notes de révision, questions résolues et sujets d'entraînement, pour que vous révisiez intelligemment au lieu de jongler avec quatre manuels. Il convient aux élèves de classe 10 du CBSE, en particulier ceux qui révisent dans les derniers mois précédant les examens.

Les idées clés

Nationalism in India: Gandhi's mass movements

The history section opens with how the First World War, Khilafat and Non-Cooperation shaped Indian nationalism. You follow the Rowlatt Act, Jallianwala Bagh, the Non-Cooperation and Civil Disobedience movements, and the sense of collective belonging that bound Indians together. Notes condense each event into exam-ready points, with questions testing causes, consequences and dates.

Nationalism here is not a list of dates but a chain of cause and effect: war hardship led to unrest, unrest to movements, movements to mass participation. The guide's value is showing how each event links to the next, which is exactly what board questions reward. Answers that trace causation score better than answers that recite facts.

À essayer: Draw a timeline of the national movement from the Rowlatt Act to Quit India, adding one cause and one consequence per event.

Resources, forests and wildlife: geography's foundation

The geography section starts with how resources are classified and why development matters, then moves to land, soil and water. Chapters on forests and wildlife cover biodiversity loss, conservation categories and government projects. Each chapter ends with NCERT-based questions and map work, so you practise locating key sites as you revise.

Geography rewards precision: classification tables, conservation categories and map locations are what examiners check. The guide's notes mirror NCERT wording because board answers are marked against it. Learning to present definitions and examples in the textbook's own terms is the fastest route to full marks.

À essayer: Practise sketching India's outline and marking major soil types and national parks from memory.

Power sharing and federalism: how democracy works

The civics section explains why power sharing is desirable, then unpacks federalism, the division of powers between Centre and states, and decentralisation to local government. Notes break the Constitution's key provisions into bullet points, and questions drill you on comparing forms of power sharing and identifying levels of government.

Civics answers hinge on structure: levels of government, lists of subjects, and organs of government. Once you can reproduce the framework, most questions become pattern-matching. The guide's bullet-point style trains you to answer in that structured form, which examiners reward with step marks.

À essayer: Write the three tiers of Indian government with one function each, from memory, in under five minutes.

Sectors of the Indian economy

The economics section opens with primary, secondary and tertiary sectors, GDP contribution and employment share. Later chapters cover money and credit, with formal versus informal lending, and consumer rights. Notes define terms like underemployment and SHGs, then follow with board-pattern questions including source-based ones.

Economics is the most numerical and example-driven of the four subjects. Comparing sector shares, distinguishing formal from informal credit, and citing real mechanisms like SHGs are what answers need. The guide's strength is turning these comparisons into tables you can memorise and reproduce under time pressure.

À essayer: Make a two-column table comparing formal and informal credit sources with interest rates and collateral for each.

Limites

Un guide en un seul volume ne peut égaler la profondeur des manuels NCERT qu'il résume, et les schémas ou cartes peuvent être simplifiés. Comme il est orienté examen, il privilégie les

questions probables au détriment d'une lecture plus large ou d'exemples actuels. Les élèves visant une profondeur conceptuelle au-delà du programme, ou ceux qui aiment l'histoire narrative, devront toujours se reporter aux manuels originaux. Les éditions vieillissent aussi vite si le programme change.

En une phrase

Un volume, quatre matières, prêt pour l'examen : révisez tout le programme de sciences sociales de la classe 10 grâce à des notes structurées et des questions d'entraînement.

Pour qui

Les élèves de classe 10 du CBSE qui veulent un volume compact couvrant les quatre manuels de sciences sociales. Utile aussi à quiconque révisant à l'approche des examens a besoin de notes structurées et de questions d'entraînement rapidement.
